Network Survey Vehicle with Laser Methane Detection System

Total methane selectivity 1 ppm sensitivity Measuring range 1 - 190 ppm Survey speed up to 40 km/h (25 mph) Traceability of monitoring missions with NGS Software The INSPECTRA[®] VSR developed by GAZOMAT[™] makes it possible to survey natural gas distribution networks from a vehicle that is driven above the underground methane pipes. With the exclusive INSPECTRA[®] laser spectroscopy detector from GAZOMAT[™] and NGS Software, the INSPECTRA[®] VSR is an amazing concentrate of leading-edge technologies. The combination of techniques makes it an impressively effective tool that meets all the productivity, reliability and traceability requirements of gas operators for surveying their low and medium-pressure networks.

Gazoma

Fast and efficient detection

- The device comprises a sampling circuit, a laser analyser, a laptop PC, a set of gas cylinders and a GPS receiver. It is installed safely in a vehicle manned by a driver and an operator.
- The samples are taken from the surface of the ground by the suction rail located under the front bumper.
- The atmosphere samples are taken into the measuring chamber for analysis.
- Any trace of methane found in the sample is reported on the on-board computer screen and automatically recorded.
- The response time below 1.5 second⁽¹⁾ makes it possible to limit the leak location perimeter.
- All survey data is automatically saved during the mission.
- GAZOMAT[™] NGS survey software with integrated GPS ensures leak localization and survey traceability.

A unique detection system: Laser spectroscopy

- Total methane selectivity. The detector has a laser diode that is specially adjusted to the absorption wavelength of methane. Benefit: no incorrect measurements due to the presence of hydrocarbons, exhaust gases, water vapour, chemicals or other potential pollutants.
- 1-ppm sensitivity thanks to the pass length of the multipass cell.
- System stability: insensitive to weather and environmental conditions.
- Survey speed up to 40 km/h (25 mph).
- Note: Cannot be used with LPG networks.

User-friendly interface

- Fully automated instrumentation checking from a laptoc PC.
- Very easy-to-use NGS software developed by GAZOMAT[™].
- · Intuitive Man-Machine interface with icons, audio and visual messages.

Enhanced safety

- No combustible gas on board (no hydrogen).
- Use of two gases only 50 ppm methane (CH₄) for operating tests,
- and nitrogen (N_2) for flushing the sampling circuit.
- Low daily maintenance.

All the INSPECTRA® instrumentation is controlled from an on-board laptop PC with the NGS software dedicated to surveying natural gas distribution networks. The software has been designed to simplify survey missions while ensuring full traceability of network monitoring.

GAZOMAT

Ease of use

- Data entry when a mission is created
- · Use of network maps in hard or electronic form
- Downloading in the NGS software of digital maps (to be provided by the customer) in the universal SHAPE format
- · Real-time recording of vehicle speed and position as well as of gas concentrations detected
- Comments entered directly by the operator anytime during the mission
- Real-time view of the vehicle route, gas leak indications as well as road network (or of any other network mapping integrated by the customer)
- At the end of each mission, a report is automatically generated in PDF format containing all data entered at the start of the mission and all survey data (leak indications, excess speed, malfunctioning, comments...). To each gas leak indication detected is associated an individual report sheet with relating map showing the leak precise location and recording date.

Systematic Gas Leak Search, a new dimension

Combined performances of the INSPECTRA[®] Laser detection system and NGS software offer new perspectives to network survey:

- Higher productivity with a survey speed up to 40 km/h (25 mph)
- An extremely easy-to-use tool specifically designed to simplify and optimize the operator's work
- Total traceability of survey missions
- A customisable survey solution with the downloading of any mapping data specific to the customer (gas network, valve network, buildings...)
- A multilingual system for use worldwide.

TECHNICAL SPECIFICATIONS

GAZOMAT

ISPECTRA® laser detector:	Measuring principle: Laser spectroscopy – multipass cell
	Total methane selectivity
	Measuring scale: 1 - 190 ppm (device calibrated and set for methane)
	Detection limit: 1 ppm
	Response time: less than 1 second
	Usage temperature: -15°C to +40°C
	Storage temperature: -20°C to +50°C
	Humidity: < 80% relative humidity
CLASS 1	Patents No 7352463, No 1647820 and No ZL 02829531.5
of the following elements:	INSPECTRA® laser detector
	Suction rail with 8 sample intakes
	Suction pump with a maximum rate of 800 l/hr
	Filters integrated into the sampling circuit
	Probe for detecting the presence of water with automatic triggering of nitrogen
	flushing
	Solenoid valves and flow meter for the continuous checking of the flow of
	samples and reference gas
	Nitrogen flushing circuit
	 Sensor test circuit with 50 ppm CH₄ reference gas
	• System response time: < 1.5 second (variable depending on the vehicle model
	and the configuration of the installation)
	Optimum survey conditions: dry and frost-free ground, no strong wind
	Installation of the system on all vehicle types (ergonomics and configuration of the
	installation to be defined with the order).
Gas used:	 50 ppm CH₄ (methane) reference gas to test the detector
	• Nitrogen (N ₂) to flush the sampling circuit
Electrical system:	• Main power supply from the vehicle alternator to all the instrumentation, the laptop PC.
0000	suction pump and reading lamp by switching on the main switch on the fuse panel.
	System power supply: o 150 Watts (in normal use)
	o 220 Watts minimum (with all the equipment)
Laptop computer:	 Of the make recommended by GAZOMAT[™] for its ruggedness and network survey
0.0.0.0	performance.
	Minimum connectors required: 2 USB connectors available
NGS software:	Running with Microsoft® Windows® XP and Windows® 7
GPS system:	GPS receiver specifically dedicated to network survey
	Communication protocol - NMEA standard (may be coupled with a road navigation system
Mapping:	Digital cards supplied by the customer in two possible formats:
	- SHAPE format (.shp)
	- Or proprietary format (.rsf)
